

## Daves Country Built Mailboxes: Special Instructions for Lighthouse Mailbox

### Flag Assembly

When the Lighthouse Mailbox is shipped via UPS the mailbox red flag is removed from the side of the mailbox to avoid being broken during shipment. You'll find the flag, with hardware, in the mailbox itself (this includes the red flag, a threaded bolt, a short rubber tube, and a locknut). A hole is already drilled on the right side of the mailbox.

Place threaded bolt through hole in flag, then place the short rubber tube onto the bolt on the other side of the flag. Now put the bolt through the mailbox hole and thread locknut onto the bolt from the inside of the mailbox. You'll need a screwdriver and pliers to do the flag assembly.

### Solar Light

The solar light is already assembled to the mailbox, however it needs to be activated.

Take the black top of the solar light and turn it to the right to remove. Under the cap are two batteries. One of the batteries has a long strip of yellow paper attached to stop the battery connection. Pull this strip out. Make sure the battery is now making a connection.

Put the cap back on by pressing in down. Light should work at this time.

For further help, the solar light box and instructions are also left inside the mailbox. Please read them.
